

"Discover Communities makes it easy for residents to access information about our local government and greatly assists stakeholders in their planning and development applications"

GIS Team,
Meander Valley

ONE OF OUR RECENT PROJECTS

Discover Communities is promoting local communities through the use of web mapping.

Insight GIS are powering effortless GIS for the needs of today's local governments. Founded in 1989, we have a proven track-record of creating for our customers the optimum solution for their specific GIS needs.

Insight GIS developed the Discover Communities solution for online mapping and public engagement for local governments in Australia. Discover Communities is not seen as a mapping but as a communication tool that uses maps. It allows local governments to not only deliver information to but engage with their residents.

COMMUNITY RESPONSE

The response to local governments who implement Discover Communities is typically immediate and positive.

"I love it! Well done Kingborough, that's clever town planning"

"Just found another path on the website I never knew existed. Very handy!"

"This is brilliant!!"

WHY

Local governments are currently challenged with a high-level of technological expectancy from residents and the community. They are looking for increased services and are expecting information at their fingertips.

Those with Discover Communities are finding that by providing their community with a contemporary way to encourage activities like walking and shopping local they are as a result achieving the following benefits:

BENEFITS

ENVIRONMENTAL

Helping us tackle climate-change

ECONOMIC

Increasing spend within our LGA

HEALTH

Getting our residents active

FINANCIAL

Great tech, within our budget

SOLUTION

Key features of Discover Communities include:

- Public access to interactive geospatial data in a user-friendly format for viewing and operating.
- A user-friendly enquiry interface for generating summary property reporting with a document as the product.
- A property-based enquiry portal with an email facility.
- An automated stakeholder portal for access to digital data.
- An interactive layer displaying current development applications.
- A public viewing platform of mapping for the statutory notification of the planning scheme that enabled clearer viewing of spatial overlays with zoning and the ability to interrogate data sub-components of the natural values overlay and generate a property-based PDF report explaining those components.
